

# Creating the lab project file

These instructions are for creating Eclipse Java project files.

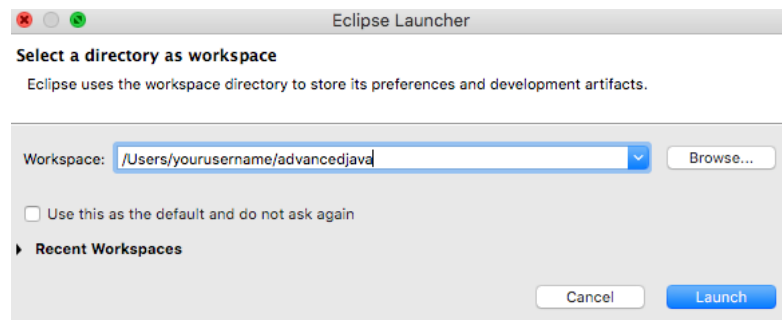

1. Fetch the source code at <https://github.com/ThoughtFlow/AdvancedJavaV2>
2. Select “Clone or download”

3. Select “Download zip”. This will create a folder named “AdvancedJavaV2-master 2” in your download folder.

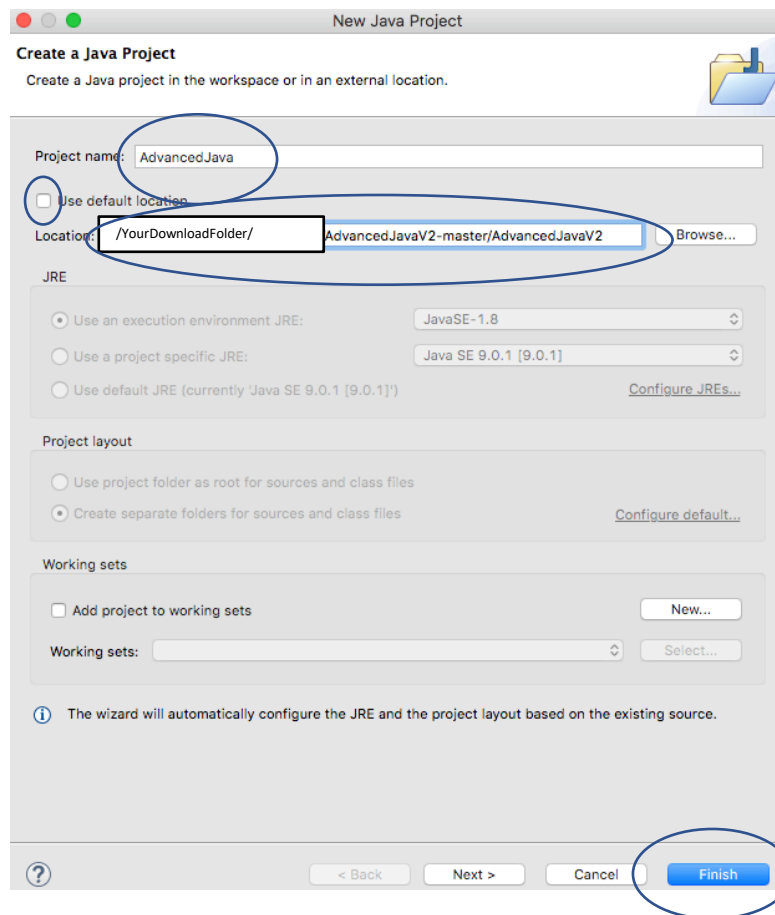

4. Start Eclipse and choose a workspace then press launch. For example:

5. Close the welcome window.
6. Select File | New | Java project

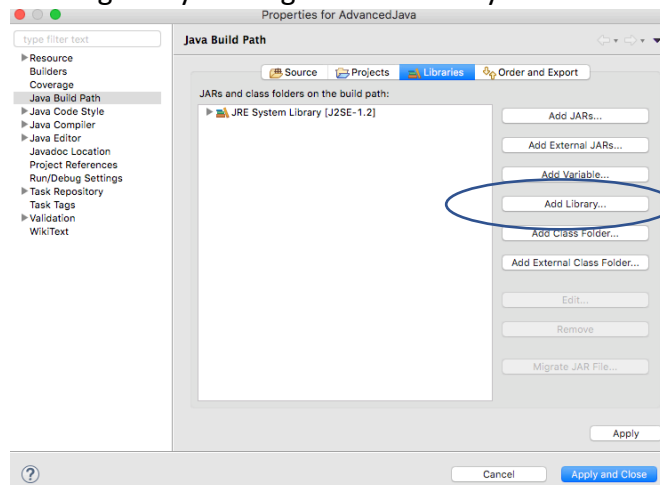

Choose a project name and untick the “Use default location” button. Then, browse to your download folder and into “AdvancedJavaV2-master/AdvancedJavaV2. Press finish.

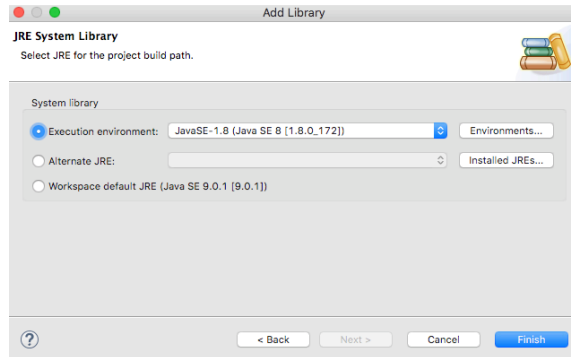

7. Ensure you have the JDK 1.8 installed. If not, follow the package instructions.

Otherwise, right click on “AdvancedJava”, choose properties, Java build path. The JRE should be 1.8. You can change it by clicking on “Add library...”.

Then select “JRE system library”, next, “execution environment” and select 1.8 then press finish.

You can remove any other JRE system library and select “apply and close”.
